Spectral methods

Wiki *Enhanced dissipation for passive scalars*

10 November 2026

Page team: to be named · Status: skeleton
Discuss on Zulip: #techniques, topic "Spectral methods".

[Lead: what the method gives, and under which hypotheses.]

1 The method

[The key mechanism, in a few lines.]

Worked example: Couette flow. What changes with a critical point: Poiseuille flow.

2 General results

[The theorems, each written as a result (statement, Lean banner, idea, proof architecture, complete proof; see How to contribute); lemmas of general use go to the Toolkit *(Standard analysis, Enhanced-dissipation tools).]*

3 Limitations and comparison

[What the method does not give, and how it compares with the other techniques.]
