Discuss on Zulip: #toolkit, topic “Enhanced-dissipation tools”.

Tools specific to enhanced dissipation. A statement comes to the Toolkit when several proofs use it, or when it holds in more generality than one result; a step used by one proof only is a claim inside that proof. Each statement is given once, with its proof or a reference, and the proofs elsewhere link to it.

1 Tools

[For instance spectral-gap and resolvent lemmas, and the link between mixing and enhanced dissipation.]
